

SKA FABRICATING™ DUAL TWIST RINSE CAGE

The Ska Fabricating™ Dual Twist Rinse Cage integrates with our Can-i-Bus depalletizer and all other canning lines running between 20-120 CPM. Standard and custom sizes are available. Rinse cage can be mounted straight off the conveyor or off the side to accommodate tight spaces.

Our Dual Twist Rinse Cage makes changing can sizes a breeze. No tools are needed. You simply slide the rinse cages from one side to the other and you're ready to go. The dual twist rinse incorporates integrated can height controls. A sensor detects the active side of the rinse cage and controls which photo-eye to use so no adjustment is required. An automatic valve switches the water supply from one side to the other saving water and eliminating the need to unhook your water source. Saves time and money.

STANDARD FEATURES

- Integrates with all canning lines running up to 120 CPM
- Integrated can height controls
